PROFESSIONAL SUMMARY

Software Development Engineer candidate and MS Information Systems student (UMBC, December 2026) with a BE in Computer Science and Engineering. Experienced in building, deploying, and troubleshooting Python data pipelines and ETL workflows across distributed systems at TCS (Citibank). Strong in data structures and algorithms, code reviews, technical documentation, and Agile delivery; pursuing the AWS Certified Developer – Associate. Seeking an SDE role building scalable, fault-tolerant, cloud-native services.

TECHNICAL SKILLS

- **Languages:** Python, Java, JavaScript, SQL
- **Cloud:** AWS (Certified Developer – Associate, in progress), Microsoft Azure (fundamentals), Google Cloud (Associate Cloud Engineer track)
- **Engineering Practices:** Agile/Scrum, Code Reviews, Git/GitHub, Technical Documentation, Troubleshooting and Debugging, Data Structures and Algorithms, Build and Deployment
- **Data and Systems:** ETL Pipelines, Distributed Systems, Data Validation, pandas, NumPy, scikit-learn, NLTK

EXPERIENCE

Software Engineer Intern *May 2026 – Aug 2026*

Tata Consultancy Services (Citibank Project) *New Jersey, USA*

- Developed and deployed a Python pipeline (pandas, scikit-learn) processing 85,000+ customer records for production data reconciliation, owning the work from design through deployment.
- Built ETL workflows for data preprocessing, validation, and integration across distributed systems, improving the reliability of downstream processing.
- Analyzed and troubleshot data issues, and validated results with multiple evaluation metrics to keep production output accurate.
- Collaborated in an Agile Scrum team through daily stand-ups, code reviews, and technical discussions; contributed to GitHub repositories following version control best practices.
- Wrote and reviewed technical documentation of data processing steps and methods, and communicated findings to technical and non-technical stakeholders.

PROJECTS

Email Security Detection System (Machine Learning and NLP) *2024*

Python | NLTK | scikit-learn | TF-IDF | Text Classification

- Designed and built an end-to-end email classification system in Python, from data exploration and preprocessing to model training and evaluation.
- Implemented a feature pipeline with tokenization, stop-word removal, TF-IDF vectorization, and n-gram analysis to prepare model input.
- Trained and compared Naive Bayes, Logistic Regression, and Random Forest classifiers, selecting the best performer through systematic validation.

EDUCATION

University of Maryland, Baltimore County (UMBC) *Jan 2025 – Dec 2026 (Expected)*

Master of Science in Information Systems

R.M.K. College of Engineering and Technology *Aug 2020 – June 2024*

Bachelor of Engineering in Computer Science and Engineering

CERTIFICATIONS

- **AWS Certified Developer – Associate** (In Progress)
- **Associate Cloud Engineer Track**, Google Cloud Career Readiness
- **Full-Stack Web Development Bootcamp** and **Agile Business Analysis**, Udemy
